Response to Arguments

It is argued, at page 3 of the Remarks, that Oikawa discloses a concentration of sodium in a target, not within the metal film of the wiring, therefore, the sodium concentration of the target is not the same as the sodium concentration in the metal film of the wiring. The Examiner is agreed. In fact, the sodium concentration should be less than that. However, the sodium concentration still meets the recited limitation of "equal to or less than".

It is argued, at page 4 of the Remarks, that Oidawa does not disclose a sodium concentration in other metals, such as tungsten. This argument is not convincing because Oikawa discloses, as shown in Col. 7, lines 56-65, that other metals can be used, such as tungsten.
